The Professional's Choice

Heating and cooling
on your terms.

With Comfort Sync® Zoning, you can now enjoy consistent, precise temperatures, along with greater control over your energy usage.

Comfort Sync Zoning matches heating and cooling preferences to your family's lifestyle using the Comfort Sync Wi-Fi® touchscreen thermostat or in-zone sensors, so every room's temperature can be easily changed on demand or stay right where it's set.

Individual zones mean precise control from room to room.

A Comfort Sync Zoning system divides your home into two, three or four different areas, or zones, each controlled by a different family member's heating and cooling needs for every day of the week.

The Comfort Sync Wi-Fi® thermostat acts as the master control for each program and small, stylish in-zone sensors allow convenient adjustment in individual areas. The sensors detect major events and subtle changes in the environment and relay the information to the thermostat if additional cooling or heating is needed. For added peace of mind, you can even use your mobile device, tablet or laptop to view and change settings from anywhere, even if it's just from your couch.

TEMPERATURE CONTROL

Each zone is under the control of its own individual thermostat, which uses a built-in digital sensor to report temperature changes to the Comfort Sync Wi-Fi thermostat. The Comfort Sync thermostat readjusts airflow to maintain your set temperature in every zone.

PRECISION AIRFLOW

The Comfort Sync thermostat adjusts the temperature of a particular zone by signaling a series of dampers installed in your ductwork to open or close. By doing this, the Comfort Sync Zoning system can redirect air to specific areas, while reducing airflow to others.

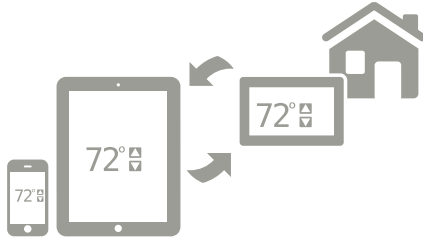

SMART ENERGY USE

Zoning allows you to match your heating and cooling needs to your life, and may reduce energy wasted by heating and cooling unused areas of your home. Plus, with proper use of pre-programmed settings, a programmable thermostat like Comfort Sync can save you almost \$180 every year in energy costs.*

Comfort Sync® offers the features that make system management simple.

REMOTE ACCESS

Allows you to check and adjust your home's temperature from anywhere using your laptop, smartphone, tablet or other web-enabled device.

SIMPLE SCHEDULING

Helps you save energy with easy, intuitive heating and cooling schedules created around your lifestyle.

ONE-TOUCH AWAY MODE

Puts your system into a pre-programmed enhanced energy-saving mode when you leave.

ALERTS AND REMINDERS

When Comfort Sync detects that repairs and regular maintenance are needed, it alerts you or your dealer instantly via email. You gain peace of mind knowing that your system will be operating precisely as soon as possible.

WEATHER DATA

Using its connection to your wireless network, Comfort Sync can display a five-day forecast and live weather alerts.

TOUCHSCREEN OPERATION

The bright, high-definition touchscreen uses simple menus and icons to make even complex operations incredibly easy.
